Fetch and detect
shallow clone at the tag; CMake, Meson, autotools or Make
agent.py, build.py
QNX toolchain, build
qcc -V<arch>, SDP sysroot, flags the rules added; configure + build
qnx.py, build.py
errors
Parse errors
GCC, ld, CMake, configure, Meson
errors.py
Rule from a QNX fact
a documented QNX 8.0 fact; numbered patch with rule, reason and error
fixes.py, linuxisms.py
no rule
Language model (optional)
only when no rule fits; unified diff + one-line reason; git apply --check
llm.py
rebuild
Rebuild on probation
a model patch, or a rule that needs proof, is reverted unless its error is gone
agent.py, patches.py
build OK
Sync to QNX target
tar over ssh into /data; ln -sP path-space link puts trees at host paths
target.py
re-run
Run the library's own tests
ctest, meson test, make check: each command on QNX under timeout -s KILL; on -u (run_as); TAP subtests counted
core
Crash triage
core from dumper, SDP gdb backtrace; printf-null patch kept only if more tests pass; crash.py
Port folder
REPORT.md, report.json, patches/, qnx.patch, toolchain, logs, SBOM
